

Malikie Innovations files a second cellular triple-jurisdictional litigation

Malikie Innovations, a subsidiary of **Key Patent Innovations**, continues its licensing assertions with a new multi-jurisdictional litigation case taken against OPPO that was recently filed in Germany, India, and the Unified Patent Court (UPC).

Since acquiring the substantial portfolio of 32,000 patents from BlackBerry in 2023, Malikie's strategic licensing campaign has been steadily gaining momentum as it broadens its IP assertions geographically. This latest triple-jurisdiction filing focuses on 4G and 5G cellular SEPs and highlights the company's commitment to asserting its IP rights.

Malikie's vast portfolio covers a broad range of both SEP and non-SEP patented technologies and its tactical assertion approach is delivering significant results. You can read more in the [IAM article](#) linked here.
